DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-10 in the reply filed on 02/17/2005 is acknowledged.

Claim 3 is withdrawn for prosecution on the merits since it is drawn to a non-elected species B.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 5-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear how the cutting blade and the cutting tool are movable along a second axis and the cutting tool is movable along a third axis. It appears that claims 5-7 read on non-elected groups.

Claim Rejections - 35 USC § 102

Art Unit: 3724

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 2, and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Daniels et al. (6,167,789 B1), hereinafter Daniels.

Regarding claim 1, Daniels teaches a cutting blind apparatus comprising:

frame defining a cutting recess;

a cutting tool 132 supported by the frame and extending into the cutting recess;

a cutting blade 138 supported by the frame and movable across the cutting tool during trimming.

See Figs. 1, 2, 10, 11 and 13.

Regarding claim 2, the cutting tool having a locating protrusion and the cutting blade having a having a locating recess are best seen in Fig. 13.

Regarding claims 4 and 8, see Figs. 2 and 6-9.

Regarding claim 10, the recess surface of the cutting blade and the protrusion surface of the cutting tool limits vertical movement of the cutting blade. See Fig. 13.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3724

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Daniels.

Daniels teaches the invention substantially as claimed except for a specific tolerance between the cutting blade and the cutting tool. Adjusting tolerance of the cutting blade and the cutting tool for smooth cutting is routine skill in the art. Therefore, it would have been obvious to one skilled in the art to provide a tolerance between the cutting blade and the cutting tool between 0.000 inch and 0.001 inch since such adjustment is routine skill in the art.
